

SMART PLUG USER MANUAL

Introduction

This product can be included and operated in any Z-Wave network with other Z-Wave certified devices from other manufacturers and/or other applications. All non-battery operated nodes within the network will act as repeaters regardless of vendor to increase reliability of the network.

In the front casing, there is button that is used to carry out include, exclude or reset factory default settings on PCB Board.

When power is first supplied, the LED will flash on and off with yellow alternately every 1 second intervals within 5 seconds if the detector has not been added a Z-Wave network, otherwise the LED will flash on and off 5 times with cyan alternately every 300 millisecond. Please get familiar with the terms below before starting the operations.

This Plug has function that remembers the relay states, the plug will turn on after power up next time if the plug is turn on before the power cut-off.

Add the Device (Smart Plug) to Z-Wave Network

1. Make sure the sensor is powered.
2. Set Z-Wave controller or Z-Wave gateway into inclusion mode (Refer to the controller or gateway operating manual)
3. Press the button three times within 1.5 second, the device will enter inclusion mode. And the LED will flash on and off with green alternately five times within 2 seconds.

Delete the Device (Smart Plug) from Z-Wave Network

1. Make sure the sensor is powered.
2. Set Z-Wave controller or Z-Wave gateway into exclusion mode (Refer to the controller or gateway operating manual)
3. Press the button three times within 1.5 second, the device will enter exclusion mode. And the LED will flash on and off with yellow alternately five times within 2 seconds.

Restore the Device (Smart Plug) to Factory Default Settings

Reset procedure will delete all information on the Z-Wave network and Z-Wave controller or Z-Wave Gateway, and restore the sensor to factory default settings.

1. Make sure the sensor is powered.
2. Press and hold the button more than 10 seconds until the LED blink with red color.
3. Release the button.

Notice: Please use this procedure only in the event that the network primary controller is missing or otherwise inoperable.

Associations

Through an association this Plug may control another Z-Wave network device, e.g. a alarm device, wall plug, lighting etc.

The Wall Plug provides three association groups, and every group can be support to associated 5

devices max.

GROUP 1 is lifeline service that assigned to plug status – ON/OFF. It enables the Plug to send reports and readings to Z-Wave Controller or Z-Wave Gateway. This Group Support:

NOTIFICATION_REPORT_V4
COMMAND_CLASS_METER_V4
COMMAND_CLASS_SWITCH_BINARY
DEVICE_RESET_LOCALLY_NOTIFICATION

GROUP 2 allows for sending control commands to associated devices such as Siren, relay module, lighting, etc. If current load is over the max current defined in parameter #3, the Plug will send a BASIC_SET (0xFF) to associated devices. When current load is normal, plug will send a BASIC_SET (0x00) to associated devices. This Group Support:

BASIC_SET

GROUP 3 allows for Send Notification to associated devices in this group. This Group Support:

NOTIFICATION_REPORT_V4

Current Load and Energy Consumption

This Plug provides line voltage, current load, power consumption and energy consumption measuring. These measurement results are sent to Z-Wave Controller or Z-Wave Gateway.

Voltage – The Supply Power Voltage For Plug.

Current – The Current for the Electric Device Connect to Plug Consumption.

Power – Power Consumed by an Electric Device in an Instant, unit: Watt(W).

Energy – Energy Consumed by an Electric Device through a Time Period. Most commonly Measure in Kilowatt-hours (kWh). One kilowatt-hour is Equal to One Kilowatt of Power Consumed over a Period of One Hour, 1kWh = 1000Wh.

NOTE: Energy (kWh) is default scale for Meter Command Class Version 1.

About Notification CC

If current load is great than value defined in parameter #3, plug will send NOTIFICATION CC to Z-Wave controller. And if there are some devices associated with this plug, it will receive a BASIC_SET command from plug.

Notification Report Command:

Event Present:

Command Class: COMMAND_CLASS_NOTIFICATION

Command: NOTIFICATION_REPORT

Notification Type: NOTIFICATION_TYPE_POWER_MANAGEMENT

Event: NOTIFICATION_EVENT_POWER_MANAGEMENT_OVER_CURRENT_DETECTED

Event Clear:

Command Class: COMMAND_CLASS_NOTIFICATION

Command: NOTIFICATION_REPORT

Notification Type: NOTIFICATION_TYPE_POWER_MANAGEMENT

Event: NOTIFICATION_EVENT_POWER_MANAGEMENT_NO_EVENT

Over Current Protection Simulating (For Certification Test / Production Test)

When the wall plug is turn on, you can set 0xFF to parameter #100 through Configure CC to trigger over current protection. If you set, the wall plug will send **NOTIFICATION_EVENT_POWER_MANAGEMENT_OVER_LOAD_DETECTED** to lifeline, and the wall plug will be turn off, red Led will blink every second. You can press the button once to clear this alarm and then the wall plug will be back to normal state.

Advanced Configuration

1. Send Meter Report Enable.

This parameter defines Disable/Enable meter report measure data to controller.

Function: Meter Report Enable

Parameter Number: 1.

Parameter Size: 1 Byte

Available Settings : 0, 1.

0– Disable Report,

1- Enable Report

Default Setting: 1.

2. Meter Report Interval

This parameter defines interval time (in seconds) that Meter report data to main controller.

Function: Set Report Interval

Parameter Number: 2.

Parameter Size: 2 Byte

Available Settings : 1 – 65535(s).

Default Setting: 300(s)

3. Configure maximum over-load current.

This parameter defines maximum current the plug can provide to load that be connected to plug. If the current consumed by load is greater than maximum current, the plug will cut off power, and send **NOTIFICATION_EVENT_POWER_MANAGEMENT_OVER_LOAD_DETECTED** to associated devices in lifeline. Red Led will blink every seconds until current is normal (less than Parameter #3). You must remove the loader and turn on the Plug (press the button once) to enable current monitor and clear **NOTIFICATION ALARM**.

This parameter value must be great than #4. If user set this parameter to default by Configure CC, the parameter #4 will be set to default value.

Function: Set the upper current threshold.

Parameter Number: 3.

Parameter Size: 1 Byte

Available Settings : 1 – 16 (Ampere).

Default Setting: 13(A).

4. Configure maximum Alarm current.

This parameter defines maximum current, if the current plug provide to load is great than this parameter, the plug will light yellow LED, but plug cannot cut-off power.

This parameter value must be less than parameter #3. If user set this parameter to default by Configure CC, the parameter #3 will be set to default value.

Function: Set Alarm upper current threshold.

Parameter Number: 4.

Parameter Size: 1 Byte

Available Settings : 1 – Parameter #3 (Ampere).

Default Setting: 12(A).

5. Led Display Enable

This parameter defines the LED indication Function ON/OFF. This parameter can be configured with 0 or 1, where 0 means disable LED indication Function and will always be turn-off, and 1 means enable LED Function.

Function: LED Enable/Disable

Parameter Number: 5.

Parameter Size: 1 Byte

Available Settings : 0, 1.

Default Setting: 1.

6. Configure power report

This parameter defines by how much power consumed must change to be reported to the Z-Wave Controller or Z-Wave Gateway, in percents. If the rate of power consumed change ratio is greater than this parameter, the plug will report the results, voltage, current, power and energy, that plug measure to Z-Wave Controller or Z-Wave Gateway.

Function: Power Reporting Setting

Parameter Number: 6.

Parameter Size: 1 Byte

Available Settings : 1 – 100 (%).

Default Setting: 5(%).

7. Remember Relay ON/OFF status

This parameter defined the relay status if remember or not. If remembered, the plug will restore the relay status last power off when the plug supply power next time.

Function: Remember Relay Status

Parameter Number: 7.

Parameter Size: 1 Byte

Available Settings : 0, 1

- 0 – Don't Remember, the relay will keep OFF when Plug Supply Power.
- 1 – Remember the Relay Status.

Default Setting: 1.

8. Configure Plug Time switch Function

This parameter defines the timer function Enable/Disable. This parameter can be configured with 0 or 1, where 0 means disable time switch function and 1 enable. The time period will be defined in parameter #9.

If this parameter is Set to 1, and when turn the plug relay on, the timer in plug start run with time period defined in parameter #9 and the plug will turn the relay off.

Function: Time switch Configure

Parameter Number: 8.

Parameter Size: 1 Byte

Available Settings : 0, 1

0 – Time switch Disable.

1 – Time switch Enable.

Default Setting: 0

9. Configure Time switch Period

This parameter defines the time period that plug time switch off. This parameter can be configured 1 ~ 65535(in minutes). If Parameter #9 is set to '1', and relay is turn-on, the relay will be turn-off after delay this parameter.

Function: Time switch Configure

Parameter Number: 9.

Parameter Size: 2 Byte

Available Settings : 1 ~ 65535(minutes).

Default Setting: 150(min)

Recommended Word

This product can be included and operated in any Z-Wave network with other Z-Wave certified devices from other manufacturers and/or other applications. All non-battery operated nodes within the network will act as repeaters regardless of vendor to increase reliability of the network.

Command Classes

The Plug supports Command Classes as Below:

0 COMMAND_CLASS_ZWAVEPLUS_INFO (V2)

0 COMMAND_CLASS_MANUFACTURER_SPECIFIC (V2)

0 COMMAND_CLASS_VERSION (V2)

0 COMMAND_CLASS_ASSOCIATION (V2)

0 COMMAND_CLASS_ASSOCIATION_GRP_INFO (V1)

0 COMMAND_CLASS_DEVICE_RESET_LOCALLY (V1)

0 COMMAND_CLASS_POWERLEVEL (V1)

0 COMMAND_CLASS_SWITCH_BINARY (V1)

0 COMMAND_CLASS_NOTIFICATION (V4)
0 COMMAND_CLASS_METER (V4)
0 COMMAND_CLASS_CONFIGURATION (V1)
0 COMMAND_CLASS_SWITCH_ALL (V1)
0 COMMAND_CLASS_BASIC (V1)

SPECIFICATIONS

Power Supply:	AC110 ~ 230V(±10%), 50/60Hz
Rate Load Current:	13A, 110-230V, 50/60Hz – Continuous Load 16A, 110-230V, 50/60Hz – Momentary Load
Power Consumption:	0.13W
EU Standards Compliance:	
Radio Protocol:	Z-Wave
Radio Frequency:	EU – 868.4MHz US – 908.4MHz
Valid Range:	Up to 60m outdoors Up to 30m indoors (Depending on terrain and building structure)
Operational Temperature:	0 – 40 °C
