

Which basically has the same information that the link <https://support.smarthings.com/hc/en-us/articles/200878314-How-to-exclude-Z-Wave-devices>

How to exclude Z-Wave devices

Z-Wave devices require a separate command and physical confirmation from the device itself (usually a button press) in order to be reset (or "excluded") and removed from a controller (like the SmartThings Hub).

Before removing a Z-Wave device, make sure you've uninstalled any configurations or SmartApps that are using the device.

Note: In order to exclude a Z-Wave device,

For iOS users:

- Tap the **menu**
- Tap **My Locations**
- Tap the **gear icon** beside your Location
- Tap your Hub
- Tap **Z-Wave Utilities**
- Tap **General Device Exclusion**
- When you see the message "Please follow manufacturer's instructions to remove the Z-Wave device from My SmartThings," perform the required exclusion process (e.g., pressing a button on the device)

Putting your hub into Z-Wave exclusion mode allows you to remove a previously included device from the hub's Z-Wave network. Are you sure you want to exclude a Z-Wave device?

Joining your hub as a secondary controller to another Z-Wave network will disconnect all smart devices on the hub's network. You will need to add these again later.
