INTRODUCTION

Thanks for choosing the Zipato's wireless door/window sensor to increase your home security. This sensor is a Z-Wave enabled device (interoperable, two-way RF mesh networking technology) and is fully compatible with any Z-Wave enabled network. Every mains powered Z-Wave enabled device acts as a signal repeater and multiple devices result in more possible transmission routes which helps eliminate "RF dead-spots". Like all Z-Wave devices displaying the Z-Wave logo, Zipato Door/Window Sensor can also be used with various Z-Wave networks and controllers, regardless of the manufacturer. This sensor monitors door/window and send Z-Wave signal when door or window is opened and closed. This product is a security enabled Z-Wave product that is able to use encrypted Z-Wave messages to communicate to other security enabled Z-Wave products. A security enabled Z-Wave controller should be used in order to fully utilize the product.

- 5 | "Inclusion" [adding] to the network: Put your Z-Wave Controller into "inclusion" mode, and follow the instructions to add the Door/Window Sensor to your controller network. To start the "inclusion" mode, recommended distance between sensor and controller is up to 1 meter. Hold pressed the program switch of Door/Window Sensor for at least 1 second. The LED on the Door/Window Sensor should go solid, if not, please try again.

"Exclusion" [removing] from the network: Put your Z-Wave Controller into "exclusion" mode, and follow the instructions to remove the Door/Window Sensor from your controller. Hold pressed the program switch of Door/Window Sensor for at least 1 second for successful exclusion.

"Association": remove the cover of the Door/Window Sensor to get it into "Awake" mode, then put your Z-Wave Controller into "Association", and follow the instructions to associate the Door/Window Sensor with the other device. Close the cover back after "association" is complete, after which the Door/Window Sensor will go into "Sleep" mode for power saving reasons. One association group is supported [5 nodes].

The Door/Window Sensor has 2 normally closed contact terminals. These can be used for additional external switch wired contacts. The external switch will send signal according to the Status/Signal table to any association nodes by opening/closing the window/door.
