

Step 1 - Getting Started

Remove the abode iota from the box and place near your internet router.

Step 2 - Power

Plug the supplied AC Power adapter into a wall outlet and into the abode iota.

Step 3 - Internet Connection

Connect the ethernet cable to an open port on your router and plug in to the abode iota.

Step 4 - Battery Backup

On the bottom of the iota, push the switch forward to activate the battery backup.

Step 5 - App Download

Download and install the abode app on your iPhone or Android device and follow the quick setup process.

Step 6 - Activation Key

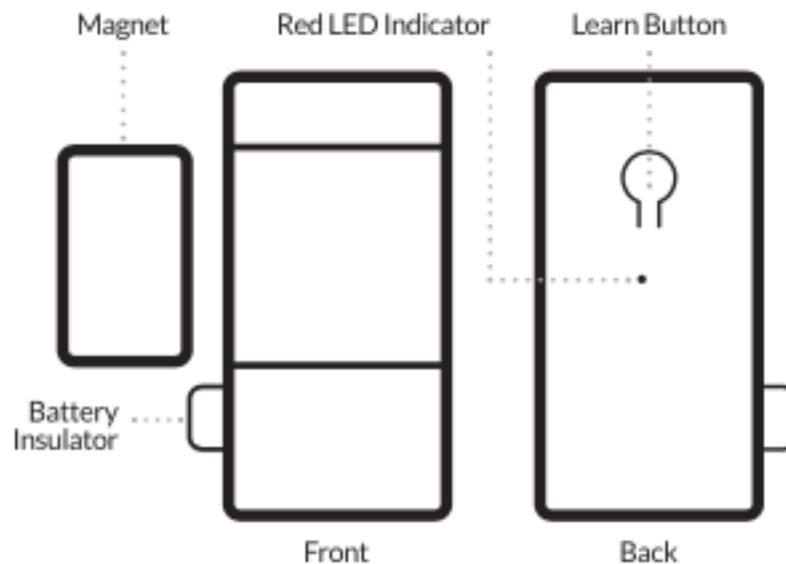

Be sure to hold on to the installation card that comes with your iota Security Kit. You will need the **Activation Key** printed on it to link your email to the device and launch your abode profile.

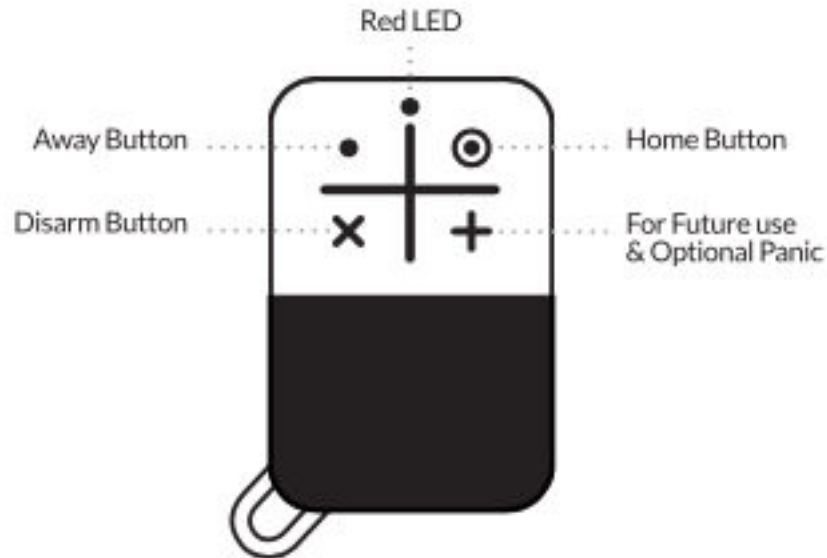

Step 7 - Pairing Process

The devices (Mini Door/Window Sensor & Key Fob) that are included in the abode iota starter kit have already been paired with the iota.

Mini Door/Window Sensor

Key Fob

Simply follow the setup process on the app to activate and name these devices.

To add additional devices, follow the information below to add them to your iota system. You can use the abode mobile or web app.

Using the Mobile App: Login to the abode mobile app and click on the settings option at the bottom right of the screen. Click on the +Add Device option and locate the proper name/icon of the device you're adding and follow the wizard.

Using the Web App: Login to the web app at my.goabode.com. Click on the +Add Device option at the top of the page, locate the proper icon for the device you're adding and follow the wizard.
